11:00 am – 12:30 pm

Neville Scarfe, Room 201

Please RSVP online by Friday, 11 March: <http://bit.ly/hVXTXw>

What does Attention and Perception have to do with the Social Development of Children with ASD?

Professor Grace Iarocci

Department of Psychology, Simon Fraser University

Research is beginning to uncover both strengths and weaknesses in the selective attention and perception abilities of children with autism, and possible links between how children perceive the world and how they develop socially. This lecture will present the latest research evidence that emerge from this exciting line of research, along with practical implications related to social development.
