***Augmentative Communication,  
Autism, and Individual  
Differences***

**November 22, 2016 | 2:00 - 3:30 p.m.**

**2125 Main Mall, Room 278 (Library Block)**

Research examining augmentative and alternative communication (AAC) intervention outcomes for children on the autism spectrum often points to overall positive group effects but substantial individual differences. In this presentation, approaches to understanding and addressing these differences will be examined, with reference to the research literature and preliminary findings from current studies.
